computer it doesn't do anything. Just look at the third "keep me signed in" option. How does one get those different types of error codes (like a "version issue" or "api error")? And how can one fix them? Now I will tell you how to fix the problem. Help. Hello, I am writing a guide to AnyDVD-Helper (or AnyDVD for short), a small tool that can help you decrypt your DVDs and rip them to files. The reason that you are having the issue is that you did not install AnyDVD-Helper correctly. So first you download AnyDVD-Helper on this page: Then you download the "AnyDVD-Helper" program from there: And finally you use the "AnyDVD-Helper" program to decrypt your DVDs. Do you think that you are up to date with your OS and programs? Then there is nothing to worry about. The only way to fix it is to re-install Windows. Hello my friends, I just want to let you know that I successfully managed to get rid of the errors. I opened up the registry and deleted all of the entries that were related to AnyDVD-Helper. Also I deleted the.exe file that was installed on my computer. Then I went to my Programs menu and removed AnyDVD-Helper from the list. How do I uninstall an ISO file? Windows Media Player is installed on my computer. The instructions on this page say to rename the ISO file to.exe. What exactly does that mean? I tried renaming it to.exe, but it says it can't. I can't even run it as an exe file. When I open it, the disc icon doesn't appear and it is just a blank screen.
